How to make software work

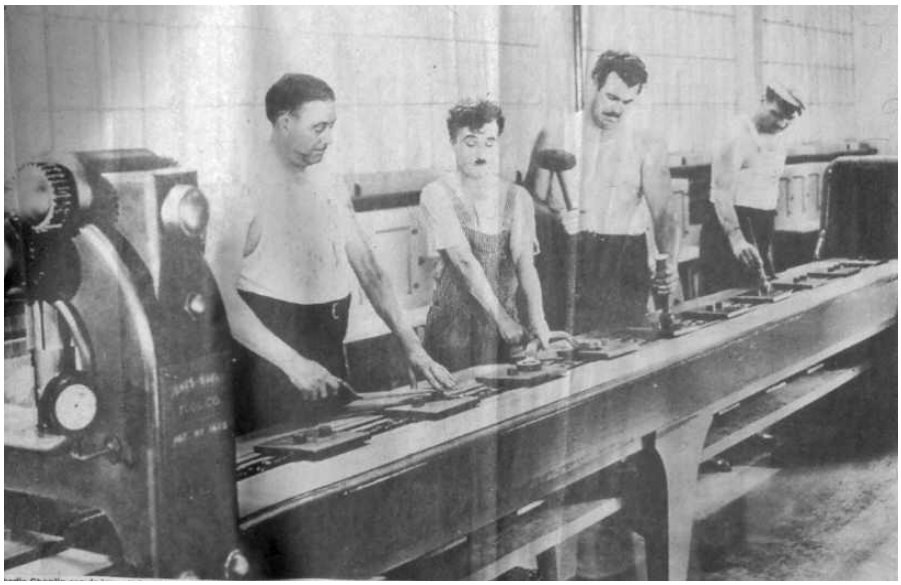
ERGOS

Charly Chaplins 'Modern times' offers a good view on quite some database applications used in offices nowadays:

Monotonous repetitive tasks, lack of task control, physically poor and no understanding of the final product.

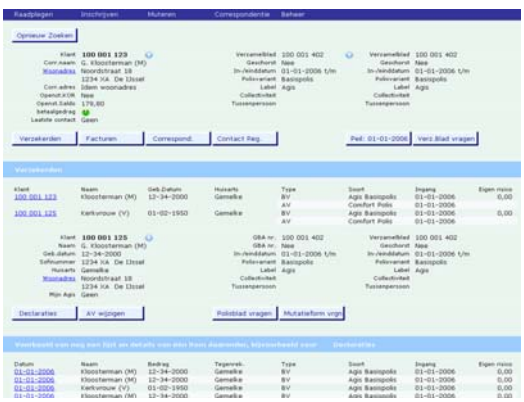
Improvement demands task analysis, redesigning richer jobs and changing task allocations between humans and machines.

Modern times in software?

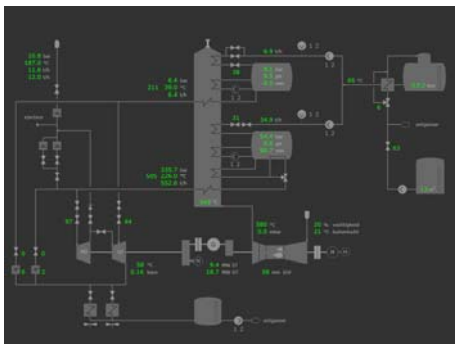


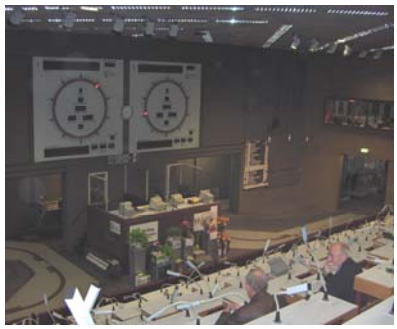
ErgoS uses System Ergonomics *to make software work in different types of business.*

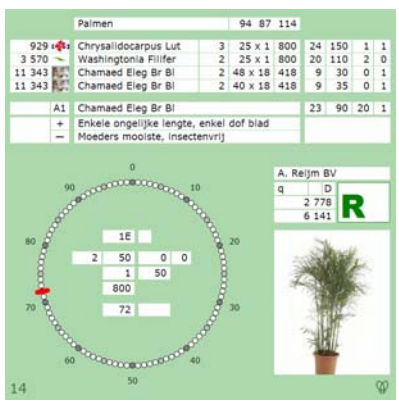
Call-center
Redesigning human computer interaction for productivity and reduced health risk.



Process industry
Designing process displays, improving control, filtering alarms.







Flower auction
Improving functionality and readability of the auction clock.
